# Symptoms of COVID-19

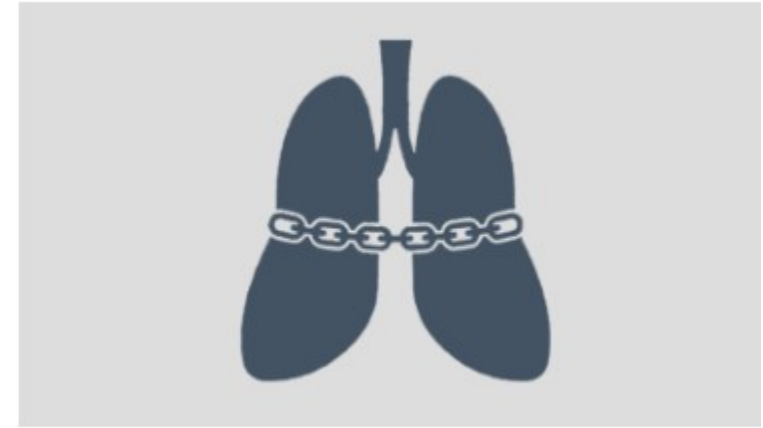

Patients have reported mild to severe respiratory illness.

Fever

Cough

Shortness of Breath

The virus is thought to spread mainly from person to person:

- Between people who are in close contact with one another (within about 6 feet).
- Via respiratory droplets produced when an infected person coughs or sneezes.

# Prevention of COVID-19

Currently, there is no vaccine. The best way to prevent infection is to take steps to avoid exposure such as:

**Wash hands with soap and water.**

**Use hand sanitizer as backup.**

**Cover coughs and sneezes.**

**Avoid touching face.**

**Disinfect often touched surfaces.**

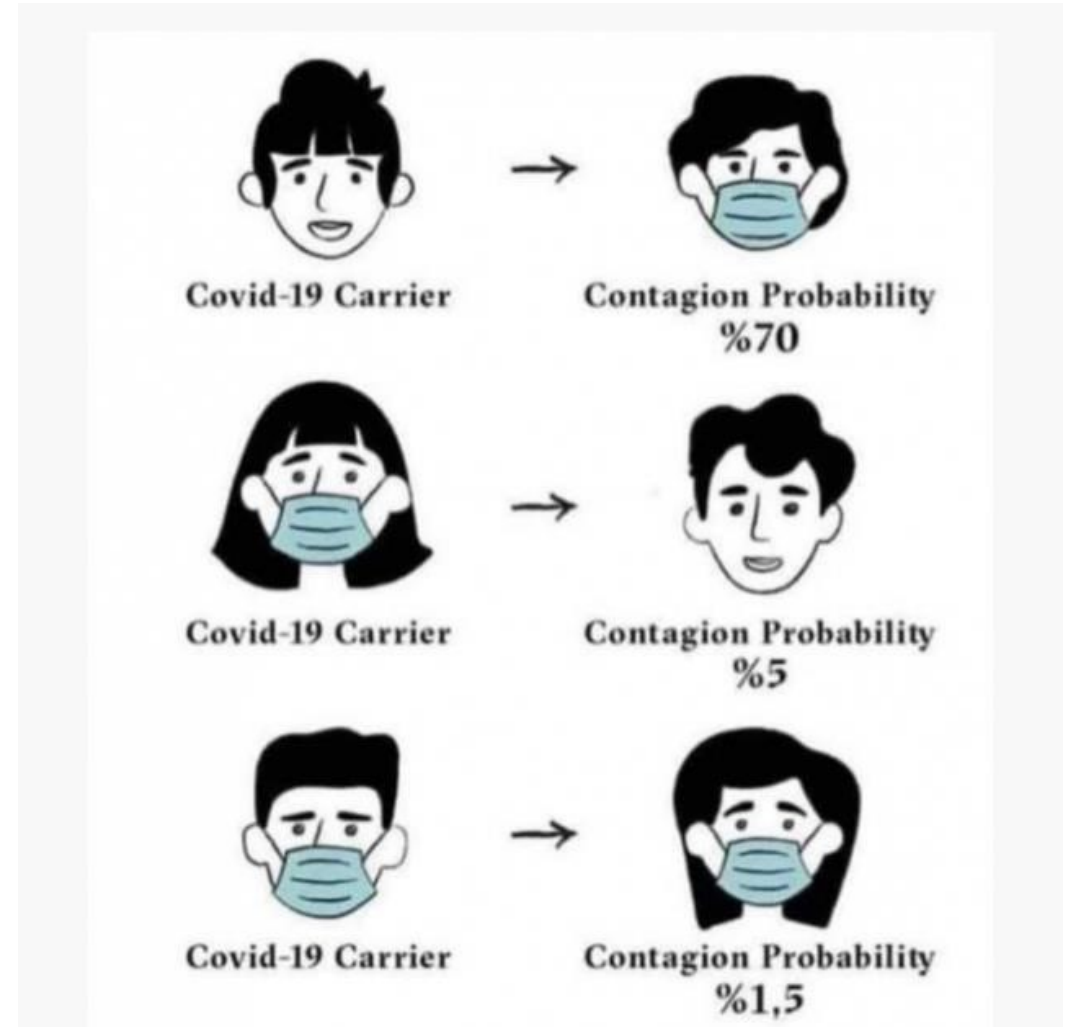

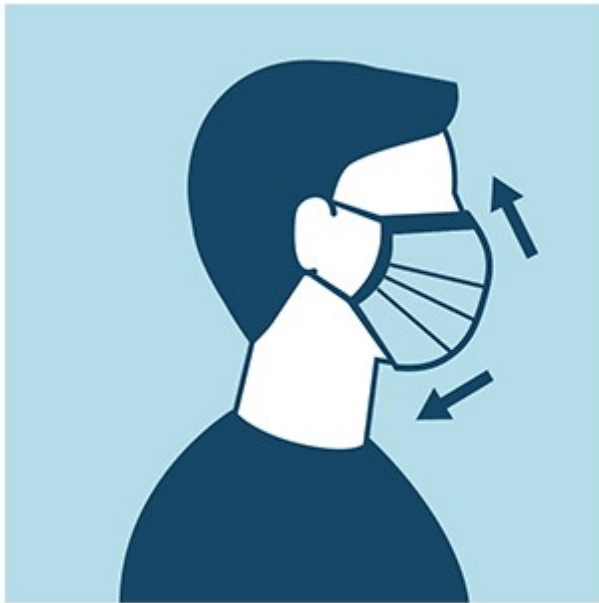

**Avoid close contact.**

# Face Masks

Cloth face coverings should—

- fit snugly but comfortably against the side of the face
- be secured with ties or ear loops
- include multiple layers of fabric
- allow for breathing without restriction
- be able to be laundered and machine dried without damage or change to shape
